Digital West Adds East Coast Point of Presence in New York Metropolitan Region

Expansion Reflects Company's Push towards Global Growth

SAN LUIS OBISPO, CA—Digital West Networks Inc. is continuing its global mission of connecting businesses to its robust network by adding a fourth point of presence (POP) in the New York metropolitan area. With existing data centers at three California locations, including 11 Great Oaks in San Jose, One Wilshire in Los Angeles, and its own data center in San Luis Obispo, this fourth location extends Digital West's reach to the East Coast.

The new POP is located in Equinix's NY2 data center and gives the company the ability to better serve its current customers as well as reach new clients with colocation, IP transit and virtual private network offerings. The expansion will also offer new peering opportunities, allowing Digital West to exchange traffic with strategic East Coast networks.

"We're already looking into our London connection," said Tim Williams, CEO and Founder of Digital West, "but our next turn-up will be across the Pacific, bringing our Sydney, Australia POP online in January," he added. With its headquarters and primary data center amidst the West Coast's three primary cable landing stations, Digital West's new East Coast expansion mirrors their California connectivity model. "This new POP will allow ease of access to internationally-connected coastal regions across the globe," Williams said.

The NY POP represents the latest achievement during the company's 15-year tenure, following milestones such as the completion of their California "ring" and the expansion of commercial Metro Fiber Internet connectivity throughout California's Central Coast.
